Professional Summary

B.Tech Computer Science (AI and Data Science) student at IIIT Kottayam and production internship experience in full-stack software engineering. Project portfolio spans graph neural networks, healthcare AI, and LLM-integrated applications, with hands-on experience building scalable AI-integrated software in Python, C++, and JavaScript.

Education

Indian Institute of Information Technology Kottayam, India Aug 2024 – Mav 2028
B.Tech in Computer Science (AI and Data Science)

Experience

InLighnX Global Pvt. Ltd. May 2025 – Aug 2025
Full Stack Development Intern Remote

- Built and shipped full-stack features across multiple production web applications using React, Node.js, and REST APIs, directly improving end-user workflows.
- Designed and implemented Firebase-backed real-time data pipelines and JSON-based API contracts between frontend and backend services, ensuring consistent data integrity across the stack.

Selected Programs

Amazon ML Summer School 2026
Participant Amazon

- Selected for Amazon ML Summer School 2026, an intensive machine learning program covering core ML concepts and industry applications.

Projects

SentinelGraph – Android Malware Detector 2026
Hackathon project

- Designed an end-to-end APK analysis pipeline using Androguard to extract call graphs, DEX bytecode, and AndroidManifest metadata through static reverse engineering.
- Trained a 2-layer Graph Attention Network on function call graphs where nodes represent methods, permissions, and APIs to classify apps as malicious or benign.
- Integrated a GenAI layer to generate human-readable threat narratives and risk scores from model outputs.

Elliptic Bitcoin Fraud Detection 2025
Graph ML project

- Built a fraud detection system on the Elliptic dataset, a real-world temporal Bitcoin transaction graph with 200K+ nodes, to classify illicit transactions.
- Applied GraphSAGE for inductive node embedding and combined graph representations with XGBoost for final classification.
- Engineered temporal features to capture time-evolving transaction behaviour and improve robustness against coordinated fraud clusters.

GitResume – AI-Powered Resume Generator 2025
Full-stack application

- Built a full-stack resume generation system with a FastAPI backend that scrapes GitHub repositories via the GitHub API to synthesize technical accomplishments automatically.
- Integrated Groq/OpenAI LLM APIs with a local fallback engine to generate ATS-optimized bullet points and implemented a Jinja2-based LaTeX compiler for professional resume export.
- Containerized with Docker and deployed to Vercel as a monorepo with a serverless FastAPI backend and React/TypeScript frontend.

Technical Skills

Languages: Python, C++, C, JavaScript, Java
AI/ML: Graph Neural Networks, GraphSAGE, Graph Attention Networks, XGBoost, Machine Learning
Frameworks/Tools: React, Node.js, FastAPI, Firebase, Docker, GitHub API, Jinja2, LaTeX

Leadership and Activities

- Co-Lead, OpenVerse Club:** Lead study groups and mentor junior students on open source projects at IIIT Kottayam. Present
- Core Member, GDG IIIT Kottayam:** Organized Google Developer Group technical sessions and AI-focused workshops for the campus community. Present
- Core Member, Enigma – AI/ML Club:** Participated in research discussions, ML paper reviews, and club-led AI project initiatives. Present
- Core Team, TEDxIIIT Kottayam:** Supported speaker curation and event production for a licensed TEDx event on campus. Present
